Data Analysis & Data Science Track

120 hrs

Bilingual

In-Class

Program Description

Today's businesses don't just collect data – they are data. By capturing every interaction, businesses know who they are and what they do. Yet despite this wealth of information, many businesses fail to use it to their advantage. Data points should be assets, not opportunities lost.

“Data analysis and Data science” track is designed to apply mathematical principals to the analysis of data to come up with descriptive, predictive & prescriptive models. As advanced analytics and the use of data has been of major importance for increasing business revenue, better customer satisfaction, business decision making and improving operational efficiency, the track takes you through the use of machine learning and its major techniques for real-life use cases. It teaches you how to code all this using Python, which is one of the major programming languages used by data analysts and data scientists. This track does not require any prior programming or statistical skills.

Target Audience

- IT Professionals
- Software Professionals.
- Personal who want to begin their career in Data Science.
- Data analysis professionals
- Anyone, who wants to gain their expertise in data science and advanced data analytics.
- Professionals who have access to data that can be analyzed to come up with important business, customer insights.
